RE: Docket No. L-00000B-00-0105, Case No. 105

TO: Docket Control and Power Plant and Line Siting Committee

Dear Controller and Committee members,

I spoke at the public comment portion of the San Tan plant hearing this morning. I quoted some numbers estimating how many tons of pollution were emitted by the San Tan plant when used as a peak capacity plant up until 3 years ago (661 tons). I compared that to the emissions if the new plant and old one were both used at 80% capacity (3010 tons). My figures were based on figures given by SRP to the public at their open house. I am sending this chart to show how I arrived at projections of usages at different levels. I mentioned I had mailed it to some of the committee members and the Commissioners. I am enclosing the basis of my figures since I did not get it mailed to all members of the Power Plant and Line Siting Committee. Thank you.

Sincerely,

Suzanne Pager

Arizona Corporation Commission

\*# of tons more or less than in year in column 1)

\*\*SRP said they could operate at 100% cap. in the future. With a deregulated market, this is very likely.
